

Aim & Scope

The aim of IJEEES (the International Journal of Electronic and Electrical Engineering Systems) is to combine theory and practice in different areas of *Electrical and Electronic Engineering*. In fact, this journal provides a platform for academicians, researchers and engineers to share their experience and solutions to problems in different areas of Engineering.

Subject areas that are suitable for publication in IJEEES include, but are not limited to the following fields:

1. *Power Components and Power electronics*
2. *Electromagnetic Compatibility*
3. *High voltage engineering*
4. *Electrostatics*
5. *Electrical Machines and Actuators*
6. *Power Electrical Systems*
7. *Energy Storage and Management*
8. *Renewable energies*
9. *Embedded Energy Systems*
10. *Automation and control of systems*
11. *Signal, Image and Video Processing*
12. *Industrial and Electronic Informatics*
13. *Diagnosis and Non-Destructive Testing*
14. *Numerical modeling and methods*
15. *Microwave Circuits and Systems*
16. *Antennas and Wave Propagation*
